\*Note: The upgrade tool for DocAve version 4.1 to 4.5 is listed under the release notes for 4.5.0.1000.

## Enhancements and New Features

### *MOSS 2007 / WSS v3*

#### Data Protection

- **Backup** (*Enhanced*)
  - Addition of "Password Protection" to secure backup data (also enhanced for SP 2003)
  - Support of "Load Balancing" across all-front end web servers during the backup process
- **Platform Recovery** (*Enhanced*)
  - Backup for Project Server content, InfoPath form templates, and Site Definitions
  - Support of Volume Shadow-Copy Service (VSS) backup method for consistent point-in-time backups
  - Improved backup speed performance: up to 175 GB/hour

#### Administration

- **Discovery** (*New*)
  - View your SharePoint servers, architecture, and topology in a graphical display
  - SharePoint environments are displayed in tree form (including features, solutions, and SSP sites)
  - Search of SharePoint environments using domain, server name, IP address, and site collection filters
- **Replicator** (*Enhanced, formerly Content Manager*)
  - "Backup before replication" option created to allow for an "Undo" feature
  - Optional data compression for improved performance during replication
  - Replicate content offline by using a staging location for greater flexibility
  - One-to-many feature for replicating to multiple locations from a single source
  - Throttle control enabled to manage bandwidth consumption during replication process

- **SharePoint Administrator** *(New)*
  - Supports the editing of central administration and security settings for multiple SharePoint environments at any content level simultaneously
  - Easy browsing of SharePoint site collections, lists, etc. in tree mode
  - Search mode allows quick and easy settings and security changes across selected content
  - STSADM functions implemented in new web-based graphical interface
  - Manage report profiles, administration activity history, and site quota and locks from the DocAve GUI
- **Extension Archiver** *(Enhanced)*
  - Improved data compression and encryption as well as data retention
  - Added levels of archiving including site, subsite, list, item, and item version

## Compliance

- **Compliance Archiver** *(New)*
  - Automated archiving of SharePoint content to meet retention and compliance goals, without affecting SharePoint usability
  - Support for load balancing during archiving
  - Data compression, encryption, exclusion, auto-retention, and auditing features added for handling of all SharePoint records
  - Archive data viewable in tree and advanced search modes
- **Auditor** *(New)*
  - Actively monitors your SharePoint deployment
  - Records and tracks all user interactions

## Migration

- **File System** *(New)*
  - Supports scheduled migration of file system contents to SharePoint
  - Directly maps folder structures, document properties, and security settings
- **SharePoint 2003 to 2007** *(Enhanced)*
  - Migration from portal listings is now available
- **SharePoint Lite** *(New)*
  - SharePoint 2003 to 2007 migration now available for small business customers' migration needs
- **Exchange Public Folder** *(Enhanced)*
  - Email notification support added (also enhanced for SP 2003)
- **eRoom** *(New)*
  - Migrate eRoom content to SharePoint
  - Security mapping feature
