

DOCAVE CONNECTOR OR FILE SHARE NAVIGATOR?

While the adoption of Microsoft SharePoint has grown year after year, file shares continue to represent a significant investment for many organizations. For organizations looking to centralize this content in SharePoint, migration is certainly an option, but identifying, prioritizing, and moving all of that data can be a long and strenuous process. To help you quickly realize the value of your new platform, we've created two solutions to fit the unique needs of businesses looking to integrate existing file share systems with SharePoint.

DocAve Connector – Access File Share Content from Right Where It Lives

DocAve Connector provides your SharePoint users with direct access to file share content – including documents, audio, and video files – through existing or customizable SharePoint libraries, with all of SharePoint's powerful document management functionality enabled, including permissions management, workflows, alerts, and versioning.

DocAve File Share Navigator – Have Your SharePoint and Your Large Files, Too

DocAve File Share Navigator exposes large files such as rich media from file shares in SharePoint without the need for migration, while bypassing the native 2GB file size limitation.

To find out which tool is the right for your organization, here's a detailed comparison of features:

Functionality	File Share Navigator	DocAve Connector
Remote access without VPN to file share	✓	✓
Document thumbnails and previews	✓	✓
