

DocAve Version 4.0.19.0

Release Date: April 9, 2007

New Features

- Changed built-in database from MySQL to Derby.

Bug Fixes

- Login screen should auto populate active domain
- User defined path cannot be used when doing an out of place restore
- Job Monitor Backup Job Report throws error message when Refresh rate updated
- Client patch always shows "Apply" button even after the patch has been applied
- Grammar Fix "An error when load agents: Your license dose not support item level backup." Changed to "An error when loading agents: Your license does not support item level backup."
- Unable to save a pruning plan in TrashBin
- In Small Business Edition, added Data Retention Manager
- Media Service hanging because of special encoding files
- Site locked by AvePoint issue
- Email Notification Enhancement – error report will be sent if there is a warning in a backup
- Once a document fails to be backed up by Item level backup, it should not be browsed from Restore Controller page
- Adding additional log information to log files along with ID
- Agent type should not be selected by default during Client installation.
- Added additional logic so that if a full backup fails, the related incremental job will not run
- Title error in Log Manager page
- Public Folder GUI bug
- Item level backup failed but showed completed in Job report
- DocAve 4.0.16.0 Item restore problem
- Patch Update "Install Later" doesn't work.
- Env.cfg file overwritten when 4.0.18.0 client patch is applied
